$\mu = m^2/\rho = 0.05$
target $\frac{1}{2}L_n(\mu/2)$
random 2D order (sprinkling), N = 400
MCMC, continuum-like (38 layers)
MCMC crystal, 7 layers
MCMC crystal, 4 layers (all n < 10)
mean propagator (K)
interval size n (events strictly between x and y)
